Q.26 The following passage is taken from an article on environment.

Inhaling poisonous air is as hazardous as smoking. Air is filled with highly toxic gases. These dangerous gases in environment are released by the power industries that burn fossil fuels, industries that dispose wastes in the water, farmers using pesticides, high usage of artificial lights and loud sounds, etc. Each of these leads to generation of the life threatening cause – pollution. (A) Any use of natural resources at a rate higher than the nature's capacity to restore itself can result in pollution of air, water, and land. (B) Other than human activities, there are a few periodic natural cycles that also result in release of dangerous stuff.(C) Globalization is another major cause of pollution. (D) Globalization has become an effective facilitator of environmental degradation.

The following sentence has been taken from the passage. Which is the right place for the given sentence? Choose the alphabet to indicate the location.

Natural activities other than the human activities like volcanic eruption, dust wildfires, etc also result in creation of pollution.

- Ans  1. D
- 2. A
  - 3. B
  - 4. C

Q.49 Read the following Passage and answer the questions given below:

Internet censorship is the ability to restrict specific websites or online content from being viewed. It may come in the form of an edit, regulation, or law issued by the government. It could also occur privately if an ISP objects to the content that certain individuals wish to view. The advantage of allowing internet censorship is that content which is violent, obscene, or dangerous can be immediately blocked.

The above passage is a debate for internet censorship. Which of the following sentence if added to the passage, adds value to the argument?

- Ans
- 1. The flow of information is restricted when it is censored.
  - 2. Most of the censorship is in the hands of the government which might misuse it for various purposes.
  - 3. Such censorship protects children from inadvertently viewing content that could be scary or harmful to them, such as the murder and decapitation videos which have made their way into facebook and whatsapp.
  - 4. Government surveillance helps in keeping a watch on cyber criminals who mount virtual attack on innocent people

### Comprehension:

Read the following passage and answer the questions given below:

A series of psychological experiments were conducted by Professor Milgram to study the effect of punishment on learning. In these experiments two participants had to take part as teacher and learner. Participants in the Teacher role were asked to deliver electric shock when learners answered wrong answers for memory based questions. In the experiment, Teachers were willing to give continued, intense, and dangerous levels of shock to pleading learners. In reality, no real shock was delivered; the Learner, the victim who repeatedly cried out in agony for mercy and release, was not a true subject but an actor who only pretended to be shocked. The actual purpose of Milgram's Study involved an entirely different question: When is their job, how much suffering will ordinary people be willing to inflict on innocent people?

The answer is most unsettling. The typical Teacher was willing to deliver as much pain as was available to give. Rather than yield to the pleas of the victim, about two thirds of the subjects in Milgram's experiment pulled every one of the thirty shock switches in front of them and continued to engage the last switch (450 volts) until the researcher ended the experiment. The results of this study surprised everyone associated with the project, Milgram included. The reason for such inhuman behavior of a 'teacher', according to Milgram, is that his subject's inability to defy the wishes of the boss of the study—the lab-coated researcher who urged and, if need be, directed the subjects to perform their duties, despite the emotional and physical mayhem they were causing. This blind obedience to authority made them do such inhuman acts.

### SubQuestion No : 77

Q.77 What does the phrase, 'Rather than yield to the pleas of the victim,' mean?

- Ans
- 1. Tried to listen to the appeal of the learner
  - 2. Attempted to oppose the victim
  - 3. Instead of giving in to the requests of the victim
  - 4. Tried to yield to the pleas of the victim

Read the following passage and answer the questions given below:

A series of psychological experiments were conducted by Professor Milgram to study the effect of punishment on learning. In these experiments two participants had to take part as teacher and learner. Participants in the Teacher role were asked to deliver electric shock when learners answered wrong answers for memory based questions. In the experiment, Teachers were willing to give continued, intense, and dangerous levels of shock to pleading learners. In reality, no real shock was delivered; the Learner, the victim who repeatedly cried out in agony for mercy and release, was not a true subject but an actor who only pretended to be shocked. The actual purpose of Milgram's Study involved an entirely different question: When it is their job, how much suffering will ordinary people be willing to inflict on innocent people?

The answer is most unsettling. The typical Teacher was willing to deliver as much pain as was available to give. Rather than yield to the pleas of the victim, about two thirds of the subjects in Milgram's experiment pulled every one of the thirty shock switches in front of them and continued to engage the last switch (450 volts) until the researcher ended the experiment. The results of this study surprised everyone associated with the project, Milgram included. The reason for such inhuman behavior of a 'teacher', according to Milgram, is that his subject's inability to defy the wishes of the boss of the study—the lab-coated researcher who urged and, if need be, directed the subjects to perform their duties, despite the emotional and physical mayhem they were causing. This blind obedience to authority made them do such inhuman acts.

**SubQuestion No : 79**

**Q.79 Why did the teacher continue to give punishment to the learner?**

- Ans
- 1. Teacher wanted to correct the learner
  - 2. Teacher was only following the given instructions
  - 3. Teacher believed in punishing learner who answered wrongly
  - 4. Teacher believed in proving the aims of the study

Status : Answered

Chosen Option : 1

**Comprehension:**

Read the following passage and answer the questions given below:

Move aside cheetah and peregrine falcon, there is a new contender for the title of fastest animal on Earth: the Dracula ant. Scientists have discovered that the small tropical insect can snap its mandibles at up to 90 metres a second (more than 200mph), the fastest animal movement on record.

The ants use the explosive motion to attack, stun and kill prey, which is then fed to their larvae. "They're cruising around underground and if they encounter something like a centipede or a termite they can smack them with the mandibles to kill or stun them," said Andrew Suarez, an animal biology professor at the University of Illinois, who led the work. "They can then sting it to further incapacitate it and then they carry it back to the nest." "Even among ants that power-amplify their jaws, the Dracula ants are unique," said Adrian Smith, of the North Carolina Museum of Natural Sciences, who was a co-author of the study.

The species, *Myrmica camillae*, was already known to have highly specialised appendages. However, scientists were able to ascertain the exact speed of the snapping motion only with the advent of high-speed video technology over the past 10 years. The scientists also used x-ray imaging technology to observe the ants' anatomy in three dimensions to better understand how the movement works.

The observations showed that Dracula ants power up their mandibles by pressing the tips together, spring-loading them with internal stresses. Eventually, when one mandible slides across the other, each is released, in a similar motion to people clicking their fingers. Dracula ants are mostly found in the tropics in Africa and Asia. They live in large colonies underground, or inside tree trunks, so are rarely seen. Their name derives from their unusual feeding habits, which involves a form of non-destructive cannibalism. The adult ants are unable to process solid food; instead, they feed prey to their larvae and then chew holes in the larvae and drink their blood. Scientists call the arrangement a "social stomach". Scientists are conducting more studies in their natural environment to understand these ants better.

**SubQuestion No : 87**

**Q.87 Scientists used X-Ray image technology to understand:**

- Ans
- 1. How Dracula Ants move so fast from one location to the other
  - 2. How the Dracula Ants move its mandibles to catch the prey
  - 3. How the Dracula Ants behave under observation
  - 4. How the Dracula Ants overtake the Cheetah and Peregrine Falcon

"Even among ants that power-amplify their jaws, the Dracula ants are unique," said Adrian Smith, of the North Carolina Museum of Natural Sciences, who was a co-author of the study.

The species, *Myrmica ruginodis*, was already known to have highly specialised appendages. However, scientists were able to ascertain the exact speed of the snapping motion only with the advent of high-speed video technology over the past 10 years. The scientists also used x-ray imaging technology to observe the ants' anatomy in three dimensions to better understand how the movement works.

The observations showed that Dracula ants power up their mandibles by pressing the tips together, spring-loading them with internal stresses. Eventually, when one mandible slides across the other, each is released, in a similar motion to people clicking their fingers. Dracula ants are mostly found in the tropics in Africa and Asia. They live in large colonies underground, or inside tree trunks, so are rarely seen. Their name derives from their unusual feeding habits, which involves a form of non-destructive cannibalism. The adult ants are unable to process solid food; instead, they feed prey to their larvae and then chew holes in the larvae and drink their blood. Scientists call the arrangement a "social stomach". Scientists are conducting more studies in their natural environment to understand these ants better.

**SubQuestion No : 94**

**Q.94 In the passage, the quick motion of mandibles is compared to:**

- Ans
- 1. Explosive motion to attack, stun and kill the prey
  - 2. Smacking and stunning prey
  - 3. Spring loading them with internal stresses
  - 4. People clicking their fingers

Question ID : 96623127360

Status : Answered

Chosen Option : 1

**Comprehension:**

Read the following passage and answer the questions given below:

Move aside cheetah and peregrine falcon, there is a new contender for the title of fastest animal on Earth: the Dracula ant. Scientists have discovered that the small tropical insect can snap its mandibles at up to 90 metres a second (more than 200mph), the fastest animal

movement on record.

The ants use the explosive motion to attack, stun and kill prey, which is then fed to their larvae. "They're cruising around underground and if they encounter something like a centipede or a termite they can smack them with the mandibles to kill or stun them," said Andrew Suarez, an animal biology professor at the University of Illinois, who led the work. "They can then sting it to further incapacitate it and then they carry it back to the nest." "Even among ants that power-amplify their jaws, the Dracula ants are unique," said Adrian Smith, of the North Carolina Museum of Natural Sciences, who was a co-author of the study.

The species, *Myrmica camillae*, was already known to have highly specialised appendages. However, scientists were able to ascertain the exact speed of the snapping motion only with the advent of high-speed video technology over the past 10 years. The scientists also used x-ray imaging technology to observe the ants' anatomy in three dimensions to better understand how the movement works.

The observations showed that Dracula ants power up their mandibles by pressing the tips together, spring-loading them with internal stresses. Eventually, when one mandible slides across the other, each is released, in a similar motion to people clicking their fingers. Dracula ants are mostly found in the tropics in Africa and Asia. They live in large colonies underground, or inside tree trunks, so are rarely seen. Their name derives from their unusual feeding habits, which involves a form of non-destructive cannibalism. The adult ants are unable to process solid food; instead, they feed prey to their larvae and then chew holes in the larvae and drink their blood. Scientists call the arrangement a "social stomach". Scientists are conducting more studies in their natural environment to understand these ants better.

**SubQuestion No : 95**

**Q.95 Scientists could not discover how fast the mandibles of Dracula Ants moved mainly because:**

- Ans
- 1. They were not aware of the existence of such ants
  - 2. Dracula Ants are rarely found outside and are difficult to be studied
  - 3. Human technology had not developed enough to measure their speed
  - 4. Dracula Ants are dangerous and hence cannot be studied easily

Status : Answered

Chosen Option : 2

**Comprehension:**

Read the following passage and answer the questions given below:

Postmodernism is largely a reaction against the intellectual assumptions and values of the modern period in the history of Western philosophy (roughly, the 17th through the 19th century). Indeed, many of the doctrines characteristically associated with postmodernism can fairly be described as the straightforward denial of general philosophical viewpoints that were taken for granted before or during the 18th-century Enlightenment.

There is an objective natural reality, a reality whose existence and properties are logically independent of human beings—of their minds, their societies, their social practices, or their investigative techniques. Postmodernists dismiss this idea as a kind of naive realism. Such reality as there is, according to postmodernists, is a conceptual construct, an artefact of scientific practice and language. This point also applies to the investigation of past events by historians and to the description of social institutions, structures, or practices by social scientists. The descriptive and explanatory statements of scientists and historians can, in principle, be objectively true or false. The postmodern denial of this viewpoint—which follows from the rejection of an objective natural reality—is sometimes expressed by saying that there is no such thing as Truth.

**SubQuestion No : 96**

**Q.96 Based on the passage, identify the incorrect statement from the given options.**

- Ans
- 1. Post modernism views reality as a conceptual construct.
  - 2. Post modernism is a rejection of the idea of the existence of an objective reality
  - 3. Post modernism is a reaction against the assumed superiority of modernist values and intellectualism.
  - 4. Post modernism views reality as what actually happens and not what could have been imagined or interpreted.

The descriptive and explanatory statements of scientists and historians can, in principle, be objectively true or false. The postmodern denial of this viewpoint—which follows from the rejection of an objective natural reality—is sometimes expressed by saying that there is no such thing as Truth.

**SubQuestion No : 97**

**Q.97** In the context of the passage, choose the most suitable meaning for the term 'conceptual construct':

- Ans
- 1. Construction of an idea that is not supported by facts
  - 2. A conceptual product of ideology, history or social circumstances
  - 3. To take different components and build it as a singular idea
  - 4. A concept that has been falsely created

Comprehension:

Read the following passage and answer the questions given below:

Postmodernism is largely a reaction against the intellectual assumptions and values of the modern period in the history of Western philosophy (roughly, the 17th through the 19th century). Indeed, many of the doctrines characteristically associated with postmodernism can fairly be described as the straightforward denial of general philosophical viewpoints that were taken for granted before or during the 18th-century Enlightenment.

There is an objective natural reality, a reality whose existence and properties are logically independent of human beings—of their minds, their societies, their social practices, or their investigative techniques. Postmodernists dismiss this idea as a kind of naive realism. Such reality as there is, according to postmodernists, is a conceptual construct, an artefact of scientific practice and language. This point also applies to the investigation of past events by historians and to the description of social institutions, structures, or practices by social scientists. The descriptive and explanatory statements of scientists and historians can, in principle, be objectively true or false. The postmodern denial of this viewpoint—which follows from the rejection of an objective natural reality—is sometimes expressed by saying that there is no such thing as Truth.

SubQuestion No : 100

Q.100 What does it mean when the author suggests, "reality is an artefact of science practice and language"?

- Ans  1. Reality is a human-made product of scientific perspectives, linguistic constructs and social practices.
2. Reality is independent of human beings, their minds, their societies, social practices or their investigative techniques.
3. Reality is natural and objective and points towards truth.
4. Reality is the result of human interactions and philosophical viewpoints.
